askvrp

FOR VRP
VISUAL RETAIL PLUS

FOR MULTI-STORE RETAILERS ON VRP

Ask your VRP system a question. Get the answer from your own data.

Type it the way you would ask a colleague. The answer comes back from your own VRP database as a table and a chart, usually within seconds.

The AI sees your question and the layout of your database, never the rows of an answer.

A small service in your network connects out to askvrp. Nothing connects in.

Questions only read. After setup, nothing is written to VRP until a person confirms it.

Northfield Outfitters / **Net sales by store** — Data connector

Net sales by store last week vs the same week last year

Net sales by store, week of Nov 2 vs last year

4 rows · 3.2 s

Total 156,565, up 6.6% on last year. Mill Road grew most (+15.4%). Lakeside is the only store down.

Store	Net sales	Last year	Change
001 Downtown	48,920	44,130	+10.9%
002 Lakeside	41,375	42,990	−3.8%
003 Mill Road	36,810	31,905	+15.4%
004 Harbor View	29,460	27,880	+5.7%
Total	**156,565**	**146,905**	**+6.6%**

Example screen. Names and figures are invented.

Owners ask it things like

Which items have not sold in 90 days at Lakeside?
A list you can export or keep as a report.

Open purchase orders due this month, by vendor
Then "now by store", and it keeps the thread.

Top 10 vendors by sales last month
Run it again next month with new dates.

Start with a question you already know the answer to.

Press `ASK AI` in VRP to start, then check it against the report you trust.

WHAT ASKVRP DOES

Ask first. Then the tools for the job.

askvrp

Ask and report

Plain-English questions, over thirty ready-made reports, and reports sent on a schedule.

Buy

Order forms into purchase orders, invoice matching, suggested reorders, open-to-buy.

Move and count stock

Moves between stores, a delivery split by each store's sizes, items worth counting.

Price

Markdown suggestions by your own rules, and whether past markdowns and promotions paid.

People and stores

Sales per labor hour with suggested shifts; customer lists that respect marketing choices.

Watch

Alerts when a figure moves, what changed each morning, loss-prevention checks.

Dashboards

Your figures, read every night and when you press Refresh.

Overview · Store day · Merchandising · Open-to-buy / Orders · Analytics · My tiles

Most tools are add-ons, switched on per workspace. The full list is on the askvrp tools sheet.

How it works

01 **Ask, or open a tool.** askvrp writes the query from your question and the layout of your database.

02 **It runs in your network.** A small service there checks each query itself and runs it with a read-only login.

03 **You decide.** Export, save or schedule the answer. A change to VRP waits until you press Send; your own import service writes it.

Safe by design

- ☐ **The AI never sees your answers.** Invoices and unfamiliar order forms are read by it, and the screen says so first.
- ☐ **Each person sees what their access group allows,** cost and margin included. An owner can require an authenticator code at password sign-in.
- ☐ **No inbound connections.** A question's answer is stored encrypted and deleted after a short time; a dashboard keeps its latest figures until they are refreshed.

What it costs

- One monthly subscription per workspace, with no charge per user.
- Questions and report runs use credits, inside a monthly budget your owner sets.
- Document tools and add-ons are switched on as you need them. Every price is on the askvrp price sheet.

Already on VRP? Press `ASK AI` to start.

Setup, payment and the small service in your network, from inside VRP.
